## Lasercutter AT-AT

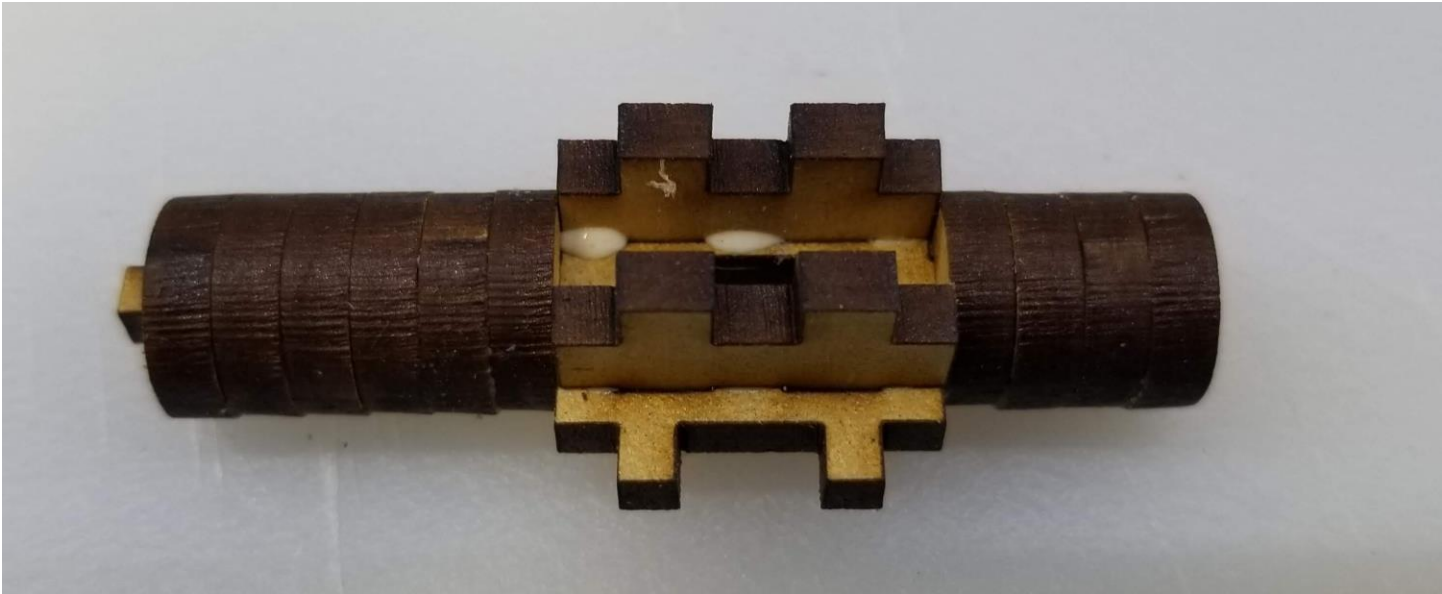

Handleiding volgen - Engels

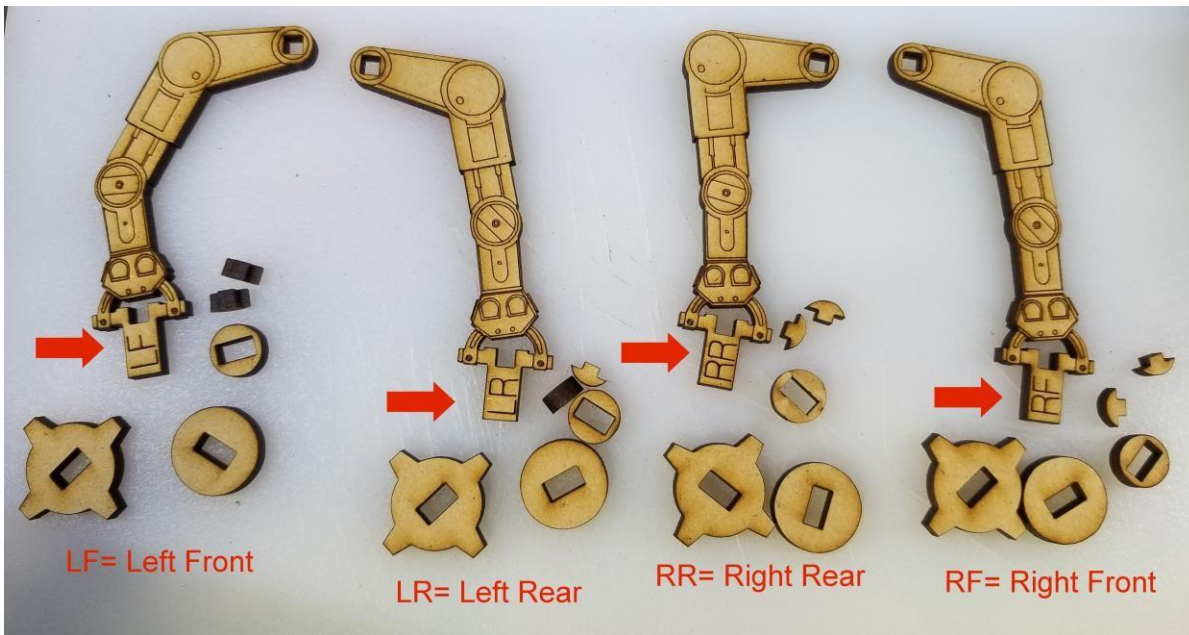

## AT-AT Walker

This is designed for 3mm material. If your material is thicker or thinner, you will need to resize the entire template. Be careful with MDF and Birch plywood because it's often labelled 3mm when it's really 1/8", which is slightly thicker.

Since the labels will be covered, make a mental note of this and use the picture for reference.

Put the smallest single part circle on first by sliding it up from the bottom. This will help support the two part circle.

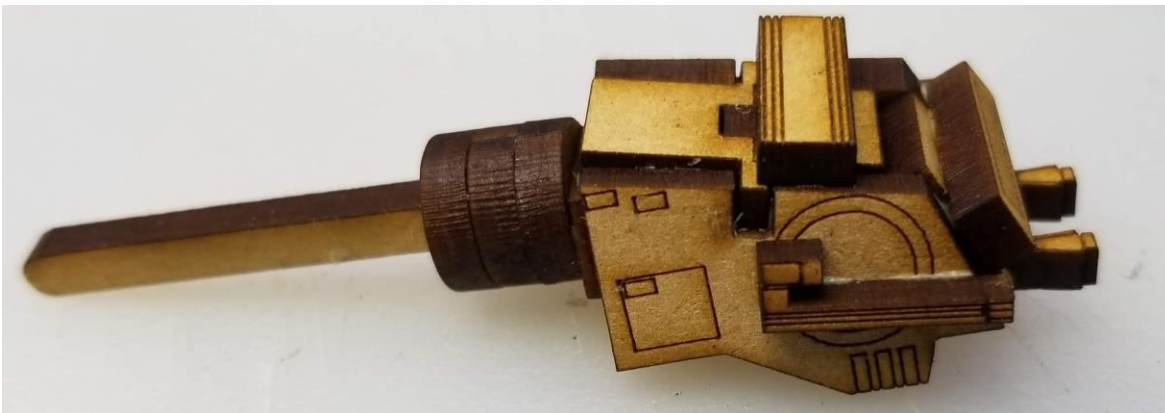

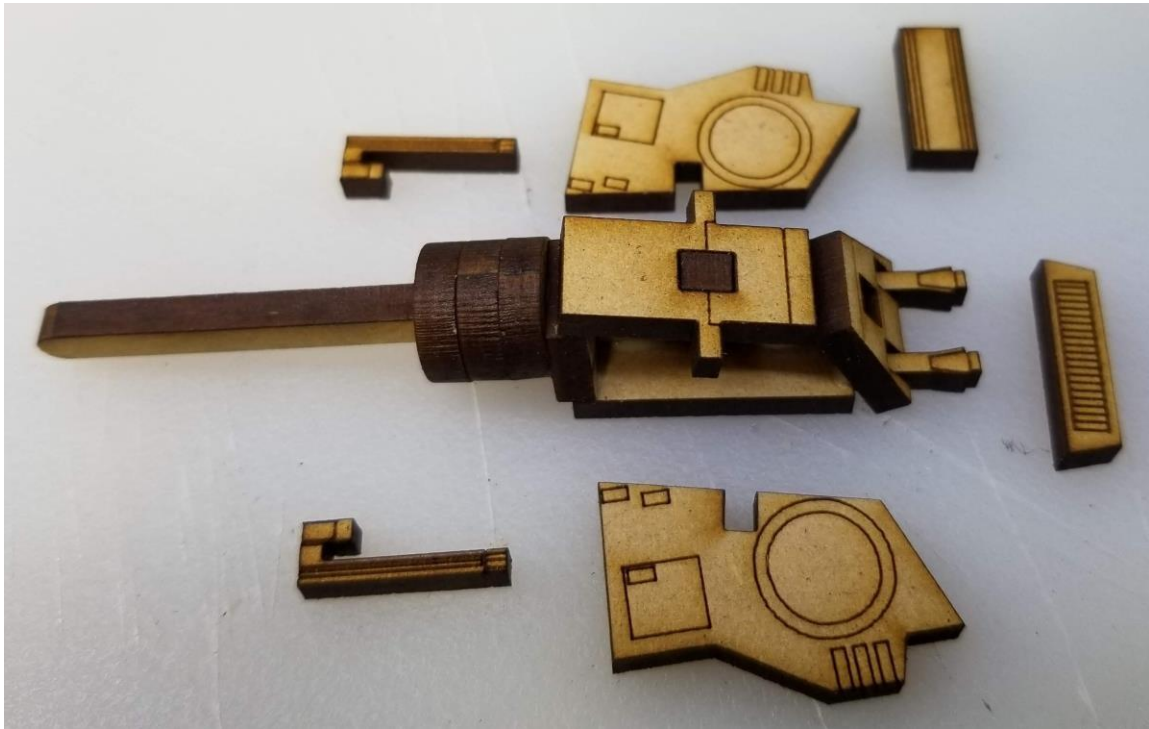

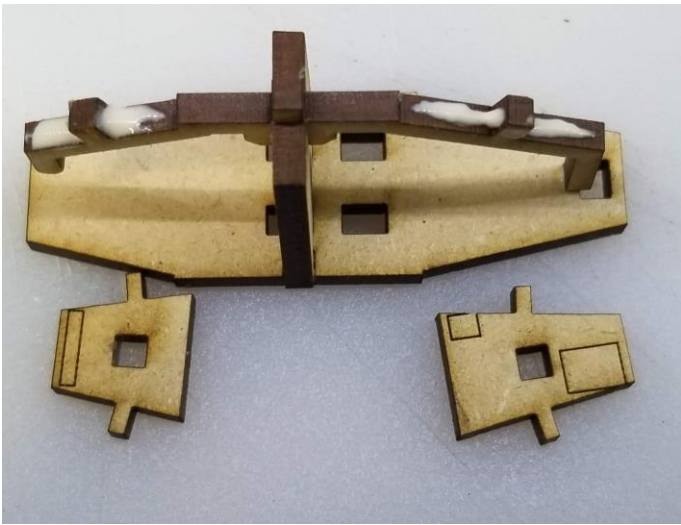

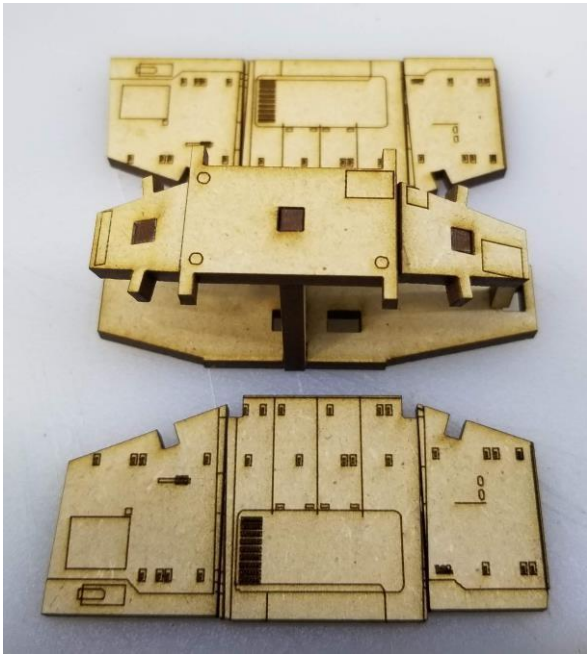

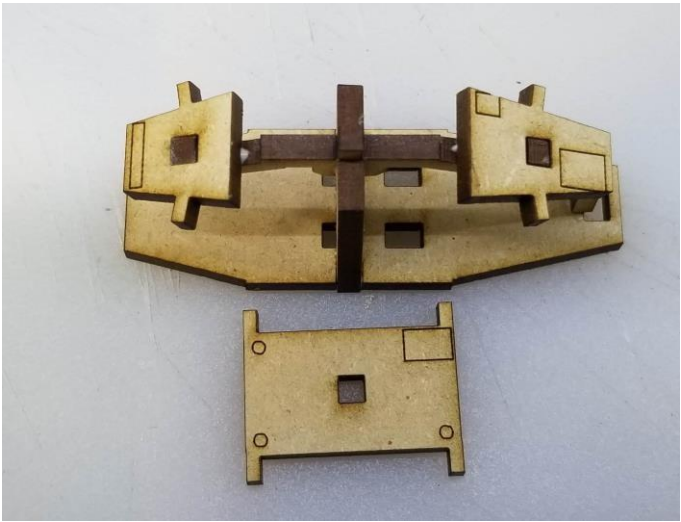

Put the front and back top pieces on first. Then the middle piece.

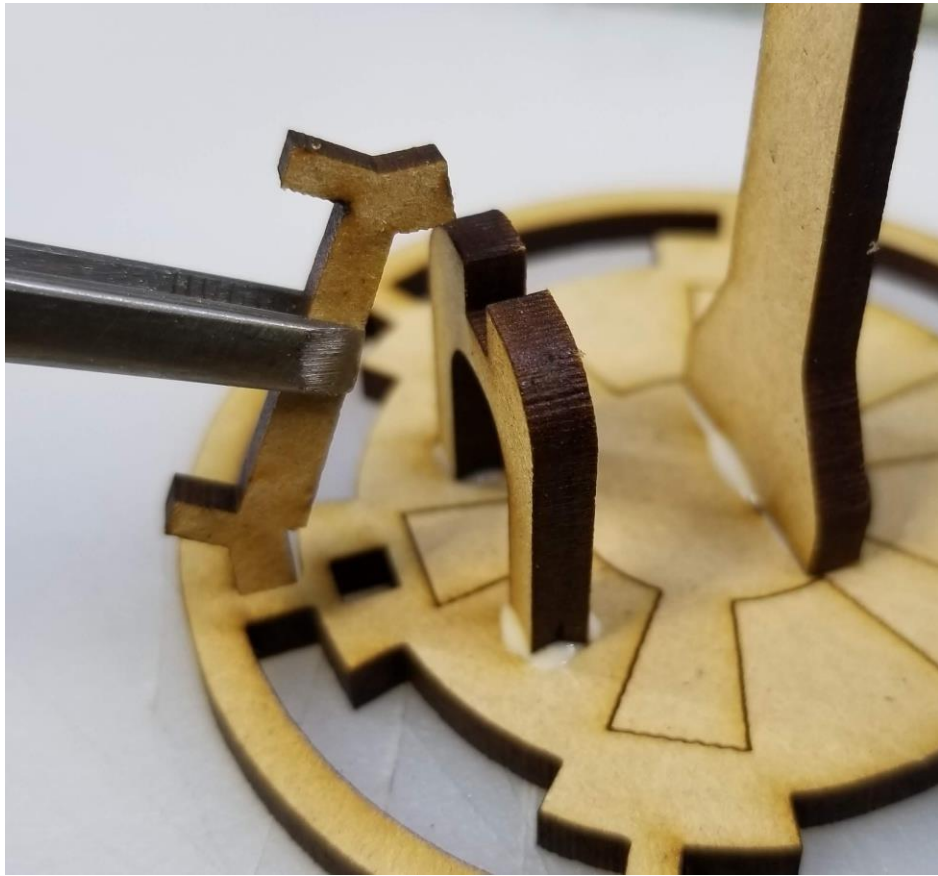

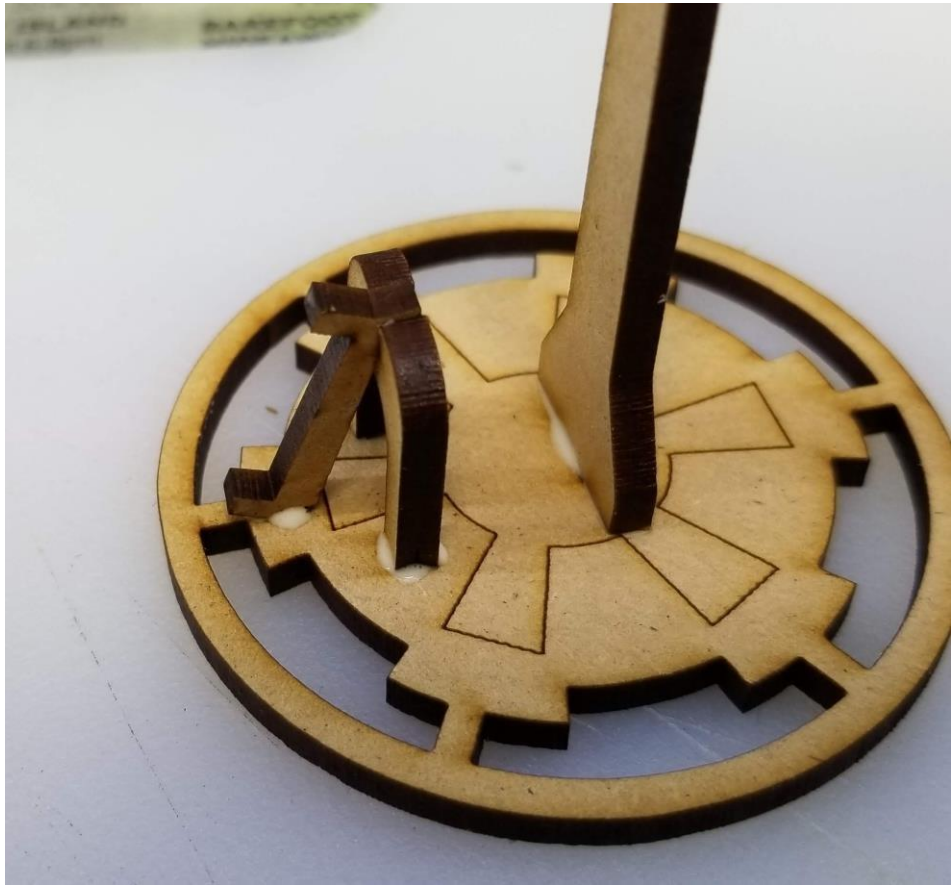

And now the stand

Straighten out the name plaque and place a drop of glue where it intersects the base on the left and right side. This will keep it from easily twisting off.
